

Limbus Contour

Accuracy Matters

Contour Quality
is the single most important
factor for any automatic
contouring solution.

At Limbus AI, our goal is to save
clinicians time with industry leading
contours.

Clinics report up to 90% contouring time saved with the reliability of Limbus Contour

Higher accuracy, more time savings

Expert Level Accuracy

Using state-of-the-art machine learning approaches to harness the power of curated clinical datasets, Limbus Contour produces automatic, expert grade organ-at-risk and clinical target volume contours. We welcome you to validate the quality and time savings on your own data.

Clinically Validated

Limbus Contour is backed by comprehensive, peer-reviewed research and extensive clinical validation. We are committed to ongoing research with an established network of international research partners.

Continuously Improving

To maintain robust performance on a wide range of scans, Limbus Contour models are fine tuned through routine clinical evaluation and re-training. User feedback guides contour development, with new structures and improved models added frequently.

Seamless Integration

Automatic contours when you
need them

LICENSED

Truly Automated

High quality contours with zero changes to existing workflows.

Limbus Contour runs entirely in the background.

New CTs immediately detected and fully customized templates automatically assigned to each scan

Contours produced with zero user input

1-3 minutes

RT-Structure Sets matching existing planning templates available for import into TPS, along with planning CT

Fully Customizable Templates

Customize AI structure sets to match your current planning templates.

Choose structure names and colors to align with your conventions.

Turnkey Models

Our rapidly expanding library includes over 50 OARs and CTVs.

Robust, accurate models that work right out of the box. No atlas creation or local curation of data necessary. Our extensive validation process and heavily curated training data result in proven performance on a wide range of scans. CT templates included: CNS, Head & Neck, Lung, Breast, Pelvis, Abdomen and Prostate. MRI OARs coming soon.

Local and Secure

Keep your data safe. Limbus Contour is optimized to run entirely on existing workstations. No cloud transfer of patient data required.

Run on Existing Workstations

Limbus Contour is optimized for performance and will run on existing clinical workstations, eliminating the need to purchase additional hardware. GPU acceleration is available for high throughput workflows for even faster local contouring times.

Secure

No GPU or cloud data sharing required. Transfer and storage of patient health information via the cloud poses significant risk. With Limbus Contour, our state-of-the-art machine learning contouring is performed entirely on local computers. All protected health information stays local and secure.

With our timely and effective service, Limbus Contour can be integrated quickly into any clinical workflow.
